ECE Global

**Your Global Partner in Engineering, Quality and Safety Compliance
Design – Fabrication – Inspection – Certification**

By utilizing either risk-based or interval-based methodologies, ECE can help clients maximize their inspection dollar. ECE helps our customers prioritize their inspection efforts and focus on areas of highest concern rather than expending resources on areas that may not require immediate inspection.

ECE Global's API inspection and testing services are performed in compliance with all API standards and recommended practices by certified 510, 570, and 653 inspectors. We provide the required support while your plant is in operation, in addition to turnaround based inspection programs.

API 570

API 653

API 510
